

TRANSPORT MANAGEMENT: ALL TRANSPORT COMPONENTS IN ONE SUITE

DISTINCTIVE FEATURES:

Multi-modal & Multi-company: dedicated to all transport actors, local and long distance transport operators, single or multimodal. Designed for different centralized or distributed operating models (e.g. onboard, in plant).

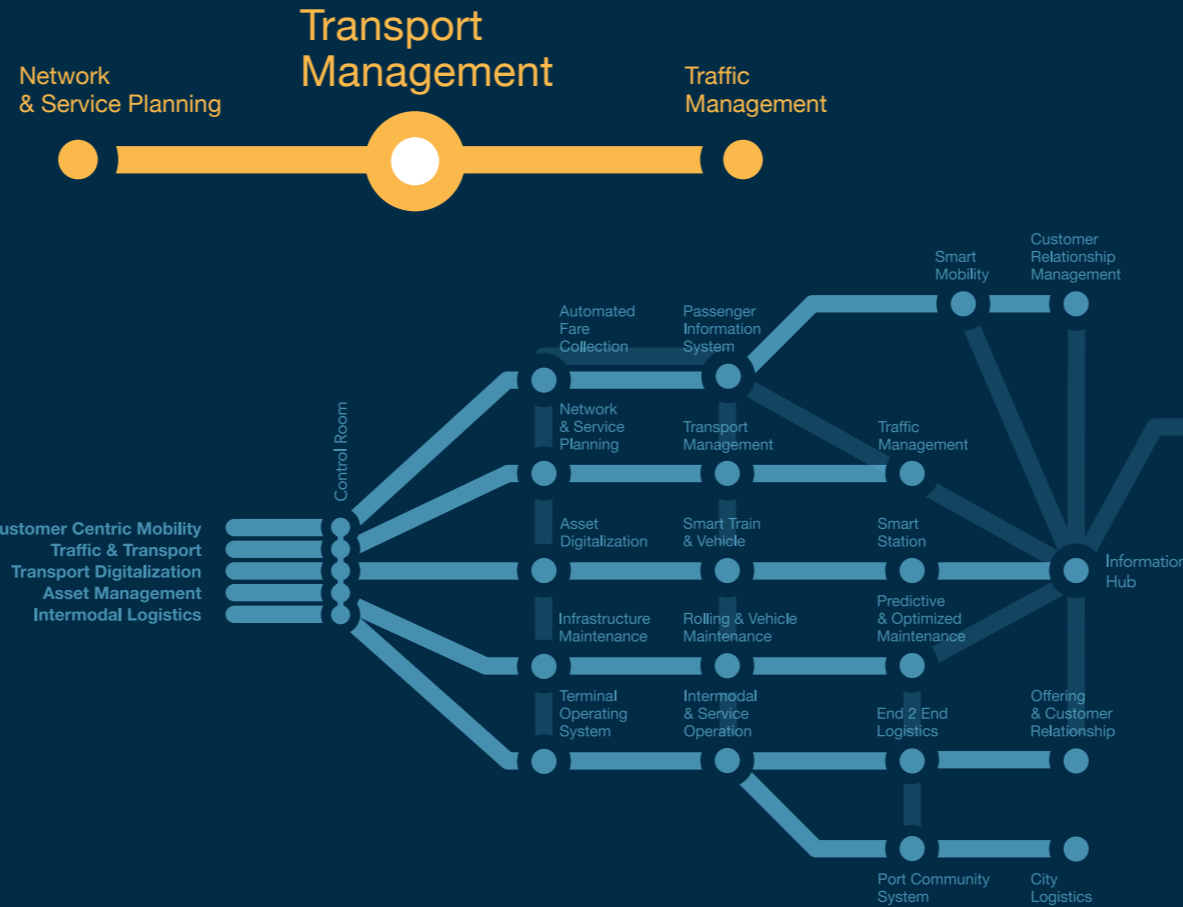

Service & Operation: monitoring and support of all operations necessary and preparatory to the normal execution of the journeys according to the scheduled times.

Multi-services & Multi-resources: integrated management of different transport services and necessary resources (fleet, crew, infrastructure).

Prevent & Control: rules, algorithms and tools that highlight conflict situations, actual and potential disruptions and facilitate decisions through the proposal of the necessary actions (e.g. reprogramming of operations).

MANAGEMENT

VIEW_AND_ACT_IMMEDIATELY

INTEGRATED MANAGEMENT

Assisted execution of necessary operations for transport to make production processes more efficient and effective. A unique environment for different services and transport modals. A single integrated tool to manage in real time all transport resources, such as vehicles, crews and infrastructures access.

TIMELY ACTIONS

Immediate identification of control actions and quickly reprogramming of journey and resources. Business rules, algorithms and specialized graphical tools enable everything need.

CONNECTIONS FOCUS

Immediate evidence of potential critical connection issues, allowing the operator's actions to reduce travelers' discomfort and create new connections or update planned connections.

A JOURNEY MANAGED REAL TIME IN EVERY ASPECT
