**MOOVA**

ABSOLUTE MOBILITY

It's the solution for asset management:  
a powerful tool for infrastructure and  
transportation network and fleet maintenance,  
enabling maintenance processes optimisation,  
from corrective to predictive maintenance, from  
warehouse management to material and spare  
parts supply chain, from investment planning to  
cost accounting management.

ASSET can integrate its own data with  
information retrieved from existing  
technological platforms managing diagnostics  
of infrastructures and vehicles, as well as  
from GIS systems mapping the transportation  
network and fleet.
